

Gazebo 4

Building instruction:

For this one I use the same instruction as for the Gazebo 2 as they are quite similar. I have just edited it slightly, therefore will the parts in the pictures not look exactly like the parts for this gazebo.

1. Cut out all the parts.

2. Put glue tape on all tabs except the ones in the bottom.

3. Put glue tape on the edges on the underside off the floor part.

4. Put the floor inside the walls and press down.

5. Glue the decoration bits on the roof and base parts.

6. Glue the roof parts together.

7. Bend the top tabs of the wall part down and take of the protection film before you put the roof on.

8. Glue the frame part on the base.

9. Now it will look like this.
Now, you just turn the base over and glue the gazebo down on the center of the base.

10. The gazebo is ready!
