

Gazebo 5

Building instruction:

For this one I use the same instruction as for the Gazebo 2 as they are quite similar. I have just edited it slightly, therefore will the parts in the pictures not look exactly like the parts for this gazebo.

1. Cut out all the parts.

2. Put glue tape on all tabs except the ones in the bottom.

3. Put glue tape on the edges on the underside off the floor part.

4. Glue the decoration bits on the roof and base parts.

5. Glue the roof parts together. Here I have put a little mark in each corner for where to fit the edge strip. The mark should be 3 mm from the edge of the roof. This will help assembling the edge strip to the roof on the right spot.

6. Put glue tape on all the tabs on the edge strips and the roof wall.

7. Now the edge strips are in place.

8. Glue the roof wall together and bend the tabs as in picture.

9. Glue together like this.

10. Glue the bottom frame on the base.

11. Insert the corner posts through the holes in the base.

12. Glue the tabs down on the bottom frame.

13. Bend the top tabs of the wall part down and take of the protection film before you put the roof on.

14. The gazebo is ready!
