

# Gazebo 1

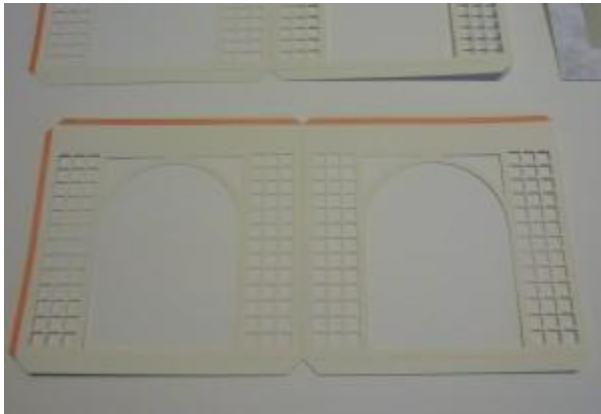

---

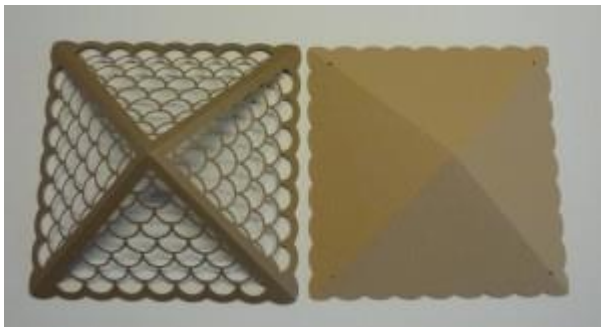

## Building instruction:

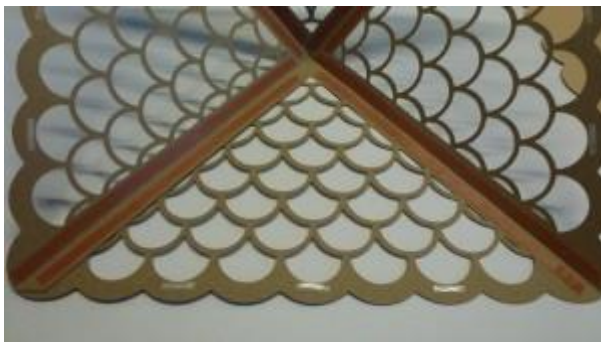

1. Cut out all the parts.

2. On the wall parts, put double-sided tape on the roof and the side tabs.

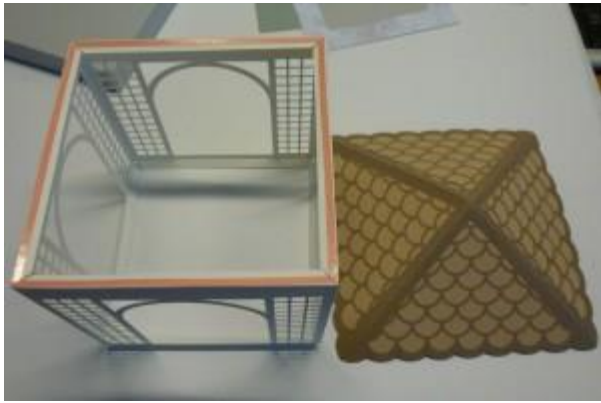

3. Glue the roof parts together.

4. Put glue tape on the inside of the top part of the roof.

5. Use a glue pen to glue the thin parts down.

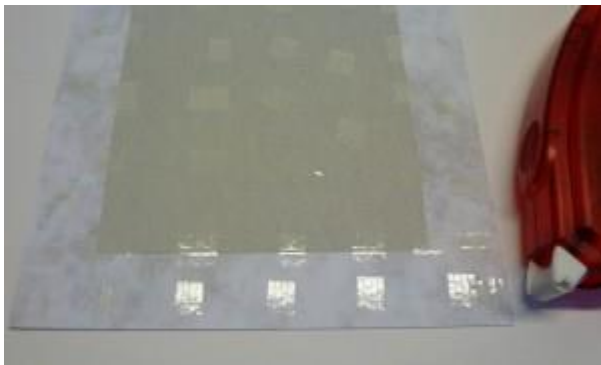

6. Put the wall parts together. Bend the top tabs of the wall part down and take off the protection film before you put the roof on.

7. On the roof part there is a tiny hole in each corner. This hole marks out where you should put the corners of the walls.

8. Now it's time to glue the inner floor parts together.

9. I use my permanent E-Z Runner for this.

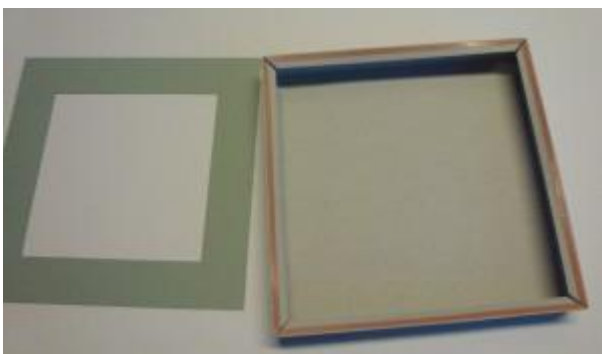

10. When the inner floor is glued together, turn it upside down and put glue tape on the edges.

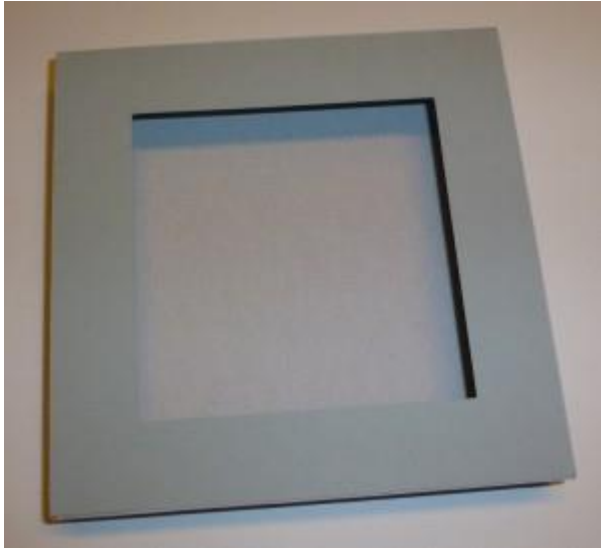

11. Put the floor part inside the walls. Turn the gazebo upright and press down on the floor part.

12. Put glue tape on the base part and fold it together.

13. The frame part is to be glued next.

14. Now the base is ready. Turn it over so that the frame is pointing downward.

15. The rectangle bits are glued to the middle on the edges just as decoration. Now when the base is ready you just center the gazebo on the base and glue it down.

16. Here is the result. I have decorated it with some hearts and rhinestones on the base and the roof has got glitter on the edge.
