

# Gazebo 6

---

## **Building instruction:**

For this one I use the same instruction as for the Gazebo 2 as they are quite similar. I have just edited it slightly, therefore will the parts in the pictures not look exactly like the parts for this gazebo.

1. Cut out all the parts.

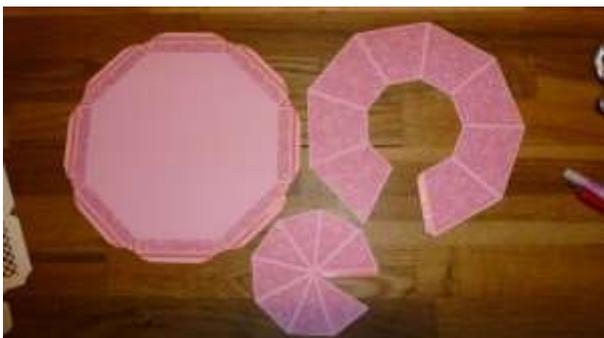

2. Put glue tape on all tabs except the ones in the bottom.

3. Put glue tape on the edges on the underside of the floor part.

4. Put the floor inside the walls and press down.

5. Glue the decoration bits on the roof and base parts.

6. Put a mark in each corner of the lower roof part about half an inch (12mm) from the edge. This shows where to glue the wall parts on.

7. Do the same on the upper roof part but about 7/16" (11mm) from the edge. Glue this part together with the narrow roof top strip.

8. Put glue tape on all the tabs on the roof wall.

9. Glue the roof wall together and bend the tabs as in picture.

10. Glue together like this.

11. Bend the top tabs of the wall part down and take off the protection film before you put the roof on.

12. Glue the frame part on the base.

13. Now it will look like this.  
Now, you just turn the base over and glue the gazebo down on the center of the base.

14. The gazebo is ready!
