

3D Star Assembly Instruction

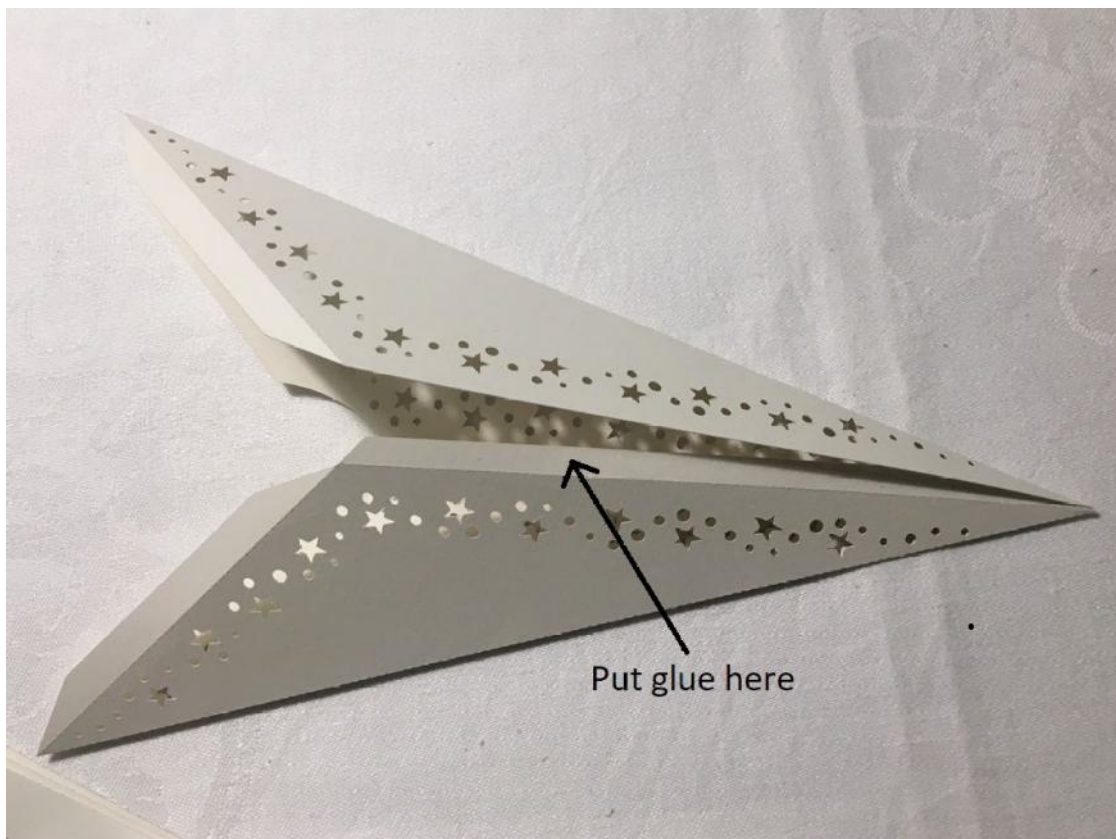

1. Cut out the pieces needed for the assembly. The amount can vary depending on the design. This star has seven points.

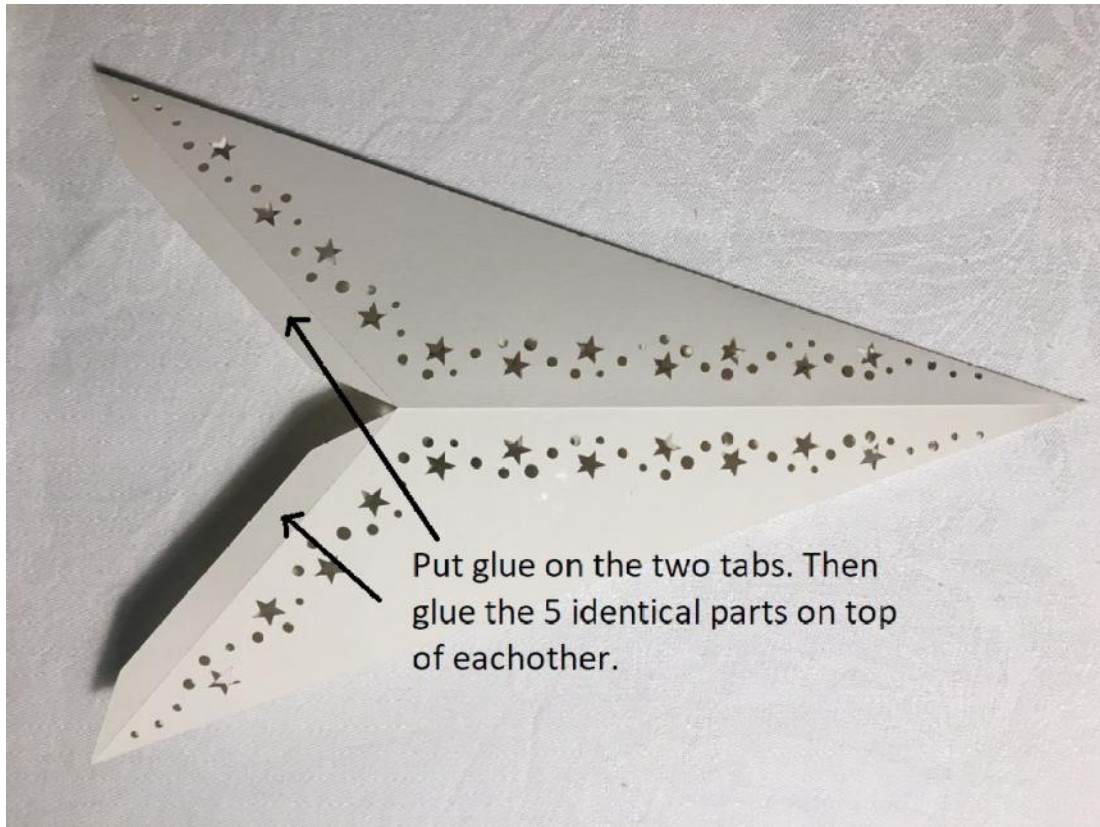

Two of the pieces has a cut out and an extra hole. The cut out is to get a clearance for the rod that the star is mounted on, and the hole is used when tying the star together with a string.

2.

Fold and unfold all the tabs. Fold and glue the pieces together like this.
