monicasc creativeroom.se

1. There are three different designs in the file depending on how the star will be mounted. Choose if you want the star to be hanging or mounted on a stand. Cut out the pieces needed for the assembly. I chose to put it on a stand in this instruction.

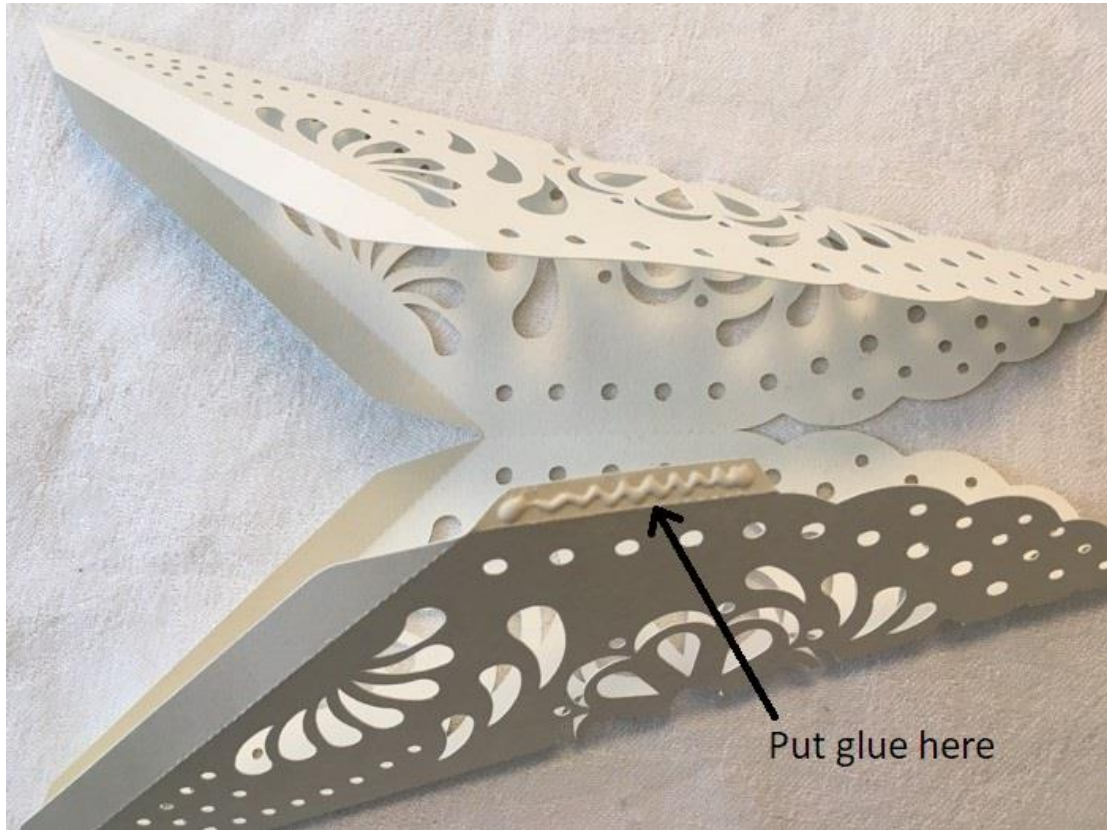

Two of the pieces have a cut out and an extra hole. The cut out is to get a clearance for the rod or the cord, and the hole is used when tying the star together with a string.

2.

Fold and unfold all the tabs. Fold and glue the pieces together like this.

3.

Put glue on the two tabs.  
Then glue the 5 identical parts  
on top of each other.

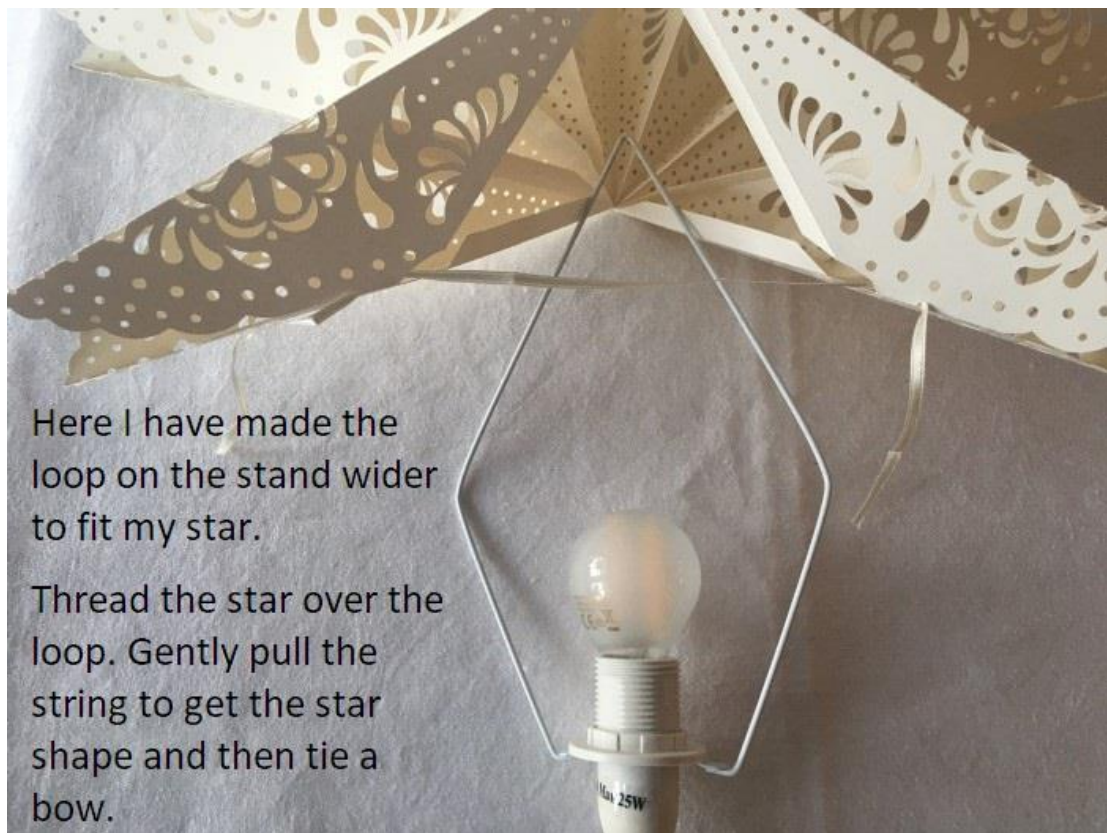

4.

Glue the last two parts together  
with the rest. One on each side so  
the cut out is on the outer side.

5.
